

QuickStats

FROM THE NATIONAL CENTER FOR HEALTH STATISTICS

Percentage* of Adults Aged ≥ 65 Years Who Received Care at Home From a Nurse or Other Health Care Professional During the Past 12 Months,[†] by Age Group — National Health Interview Survey, United States, 2018

* With 95% confidence intervals shown by error bars.

[†] Estimates are based on household interviews of a sample of the civilian, noninstitutionalized U.S. population and are derived from the National Health Interview Survey Sample Adult component. Based on a positive response to the question "During the past 12 months, did you receive care at home from a nurse or other health care professional?"

In 2018, the percentage of adults aged ≥ 65 years who received care at home from a nurse or other health care professional during the past 12 months increased with age from 4.5% for adults aged 65–69 years, to 8.2% for those aged 70–74 years and 13.2% for those aged ≥ 75 years.
