Subject HEALTH STATISTICS

I am an IBM employee of 15 yrs that was one of the first employees assigned to blg 3 in Endicott prior to it being put in [redacted] in [redacted]. After it was put into [redacted] i was assigned to blg 3 as a [redacted] and [redacted] until [redacted]. In [redacted] i was promoted into [redacted], and continued my daily activities in and around the wet process operations until [redacted] when at that time i was assigned to [redacted] wet process production and later [redacted].

through out those years we became more cogniscent of the potential effects of the chemicals we were dealing with, and implemented stronger controls to ensure the safety of those operating and maintaining the wet process equipment through out the plant. In [redacted] I was diagnosed with CLL (chronic lymphomic luekemia) a cancer of the blood which led to chemo therapy from [redacted] through [redacted] of [redacted]. Today lam considered to be in remission but have the compromised emune system due to the effects of chemo therapy. This has taken its toll on my overall health situation increasing the frequency of visits to the doctors.
