Subject IBM cancer study

My name is [redacted] and I was found to have Systemic Lupus in the mid [redacted]. I worked for IBM as
a [redacted] person in Endicott from [redacted] at which time I transferred to what was then
the [redacted]. My question is has there been any link to the effects of the chemical exposure
which I know I had to Lupus? I also would like to know which cancers have been linked to the chemical
exposures. I would appreciate any response.

Best Regards,
