Diane,

Sorry for the delay concerning the glutaraldehyde guidance. Here are my comments. Please don't hesitate to contact me if you have any questions. Thank you for the opportunity to review.

Thank you,

NIOSH DVD Comments

Working Safely with Glutaraldehyde: A Guide for Health Care Workers

Overall

Is there consistency throughout the product?

I thought that the overall presentation was very consistent in language, tone and content.

Please comment on how accurately and clearly the information is presented.

As a lay person, I do not believe I am qualified to comment on the accuracy of the content, but I believe that the information is very clearly stated in the DVD.

Assess the organization of modules and provide comment.

I thought that the modules were well organized. If I were to change one thing, I think I would move the Personal Protective Equipment for use with Glutaraldehyde to the front of the DVD. (prevention of injury first.)

Content

Is there information that is confusing or inaccurate?

I did not find any part of the DVD confusing. I am not qualified to comment on accuracy.

Is there information which should be omitted?

I do not think there was anything that should be omitted.

Is the concise format adequate and is the guidance complete?

In my opinion, there should be more information included concerning the potential health impacts associated with the different types of glutaraldehyde exposures and why specific prevention techniques are appropriate.

Conclusions

Does the product provide clear guidance which can be readily understood and implemented?

The steps provided for appropriate use of glutaraldehyde easy to understand and seemed as if easy to follow. See comment above concerning more information regarding importance of providing more information about prevention and the importance of prevention.
