FACT SHEET

Falls Are a Major Threat for Your Patients

- Every 20 minutes, an older adult dies from a fall.
- ➤ 1 out of 5 falls causes a serious injury, such as a head trauma, or a fracture.
- Less than half of the Medicare beneficiaries who fell in the previous year talked to their healthcare provider about it.
- More than 3 million older adults are treated in emergency departments for nonfatal fall injuries each year.
- Medicare costs for fall injuries total over \$31 billion annually. Hospital costs account for two-thirds of the total.

The good news— as a healthcare provider, your efforts can prevent many of these injuries!

Providers can start preventing falls with these 3 steps:

STEP 1: Screen

STEP 2: Review

Review and manage medications linked to falls.

Recommend vitamin D for improved bone, muscle, and nerve health.

1. Have you fallen in the past year?

You can screen for fall risks by

asking these three questions:

2. Do you feel unsteady when standing or walking?

3. Do you worry about falling?

CDC's STEADI tools and resources can help you screen, assess, and intervene to reduce your patient's fall risk. For more information, visit www.cdc.gov/steadi.
