The State of STIs

Sexually transmitted infections (STIs) are very common but preventable.

cases of **CHLAMYDIA;**

cases of **GONORRHEA;**

cases of **SYPHILIS;**

cases of **SYPHILIS AMONG NEWBORNS;**

Anyone who has sex could get an STI, **but some groups are more affected:**

Untreated STIs can lead to **serious health problems:**

increased risk of transmitting or getting HIV

long-term pelvic/abdominal pain

inability to get pregnant or pregnancy complications

Prevent the spread of STIs with three simple steps:

talk } test } treat
